# Skill Practice 1

Finding the GCF

✪ The **greatest common factor (GCF)** is the largest whole number that divides evenly into multiple numbers. Look at the two numbers in each problem and find the greatest common factor between them. See the example below for a step by step process to finding the GCF.

### Example

36	48	$36 = 18 \times 2$ — 2 is a prime number and divides into 18 evenly 36 times.
2	2	$36 = 9 \times 2 \times 2$ — 18 can be divided by 2, leaving 9.
2	2	$36 = 3 \times 3 \times 2 \times 2$ — 9 can be divided by 3, leaving 3. Now we have all prime numbers.
3	2	$48 = 24 \times 2$
3	2	$48 = 12 \times 2 \times 2$
3	2	$48 = 6 \times 2 \times 2 \times 2$
3	3	$48 = 3 \times 2 \times 2 \times 2 \times 2$
$2 \times 2 \times 3 = 12$		Numbers in common:
GCF		<b>2, 2, 3</b>

Once you find the prime factors of the second number, see which numbers they have in common. Circle and multiply them to get your GCF. If there are no prime factors in common, then the GCF is 1.

40	60
GCF	

30	75
GCF	

84	105
GCF	

56	96
GCF	

18	25

50	125
GCF	

72	108
GCF	

56	112
GCF	

# Bull's Eye Multiply

Use multiplication to find the points awarded for hitting each zone. The outer red circle multiplies the number by 3 and the inner blue circle multiplies it by 7.

Look at the darts on the board.  
How many points were scored?

$$\underline{\quad} + \underline{\quad} + \underline{\quad} = \underline{\quad}$$

# DIVISION WORD PROBLEMS

1. Billy receives \$15 every month for allowance. He puts \$7 of his allowance into a piggy bank until his piggy bank has \$119. How many months has he been saving part of his allowance?

2. Miss Amy collected \$6 each from her students for their upcoming field trip. If all of her students went on the field trip she would collect \$192. How many students are in Miss Amy's class?

3. Mr. Chong is also planning for his class to go on the same trip. He collects \$6 from each of his students too, but one of his students could only pay \$3 making his total \$219. How many students are in his class?

4. Kari gets \$20 every week for lunch money. She sets aside \$2 every school day. How many weeks did it take for her to save up \$65?

5. Susan is selling raffle tickets for \$4. She collects a total of \$284. How many tickets did she sell?

# LEMONADE STAND MATH 5

You and your friends run a lemonade stand everyday during the summer. You are in charge of keeping track of the volume of lemonade sold. Given the number of cups sold each day, use division to express the number of cups sold in gallons, quarts, and cups.

Follow the example below. Refer to the **conversion box** to convert your units correctly. Show and check your work.

## Conversion Box

Gal = Gallons

Qt = Quarts

C = Cups

1 Gal = 16 C

1 Qt = 4 C

Mon.

Cups sold: 19

1st: Find the number of gallons using division.

$$1 \text{ G} = 16 \text{ C} \quad \begin{array}{r} 1 \\ 16 \overline{)19} \\ \underline{-16} \\ 3 \end{array} \quad \begin{array}{l} \text{R:3} \\ \text{---} \end{array} \quad \begin{array}{l} \text{---} \\ \text{---} \end{array} \quad \begin{array}{l} \mathbf{1} \\ \text{---} \end{array} \text{ Gal}$$

2nd: Convert the remaining 6 cups into quarts. The remainder is the number of cups left over

$$1 \text{ Q} = 4 \text{ C} \quad \begin{array}{r} 0 \\ 4 \overline{)3} \\ \underline{-0} \\ 3 \end{array} \quad \begin{array}{l} \text{R:3} \\ \text{---} \end{array} \quad \begin{array}{l} \text{---} \\ \text{---} \end{array} \quad \begin{array}{l} \mathbf{0} \\ \text{---} \end{array} \text{ Qt}$$

$$\begin{array}{l} \text{---} \\ \text{---} \end{array} \quad \begin{array}{l} \mathbf{3} \\ \text{---} \end{array} \text{ C}$$

# Skill Practice 3

Finding the GCF

✪ The **greatest common factor (GCF)** is the largest whole number that divides evenly into multiple numbers. Look at the two numbers in each problem and find the greatest common factor between them. See the example below for a step by step process to finding the GCF.

**Example**

$54 = 27 \times 2$  — 2 is a prime number and divides into 54 evenly 27 times.

$54 = 9 \times 3 \times 2$  — 27 can be divided by 3, leaving 9.

$54 = 3 \times 3 \times 3 \times 2$  — 9 can be divided by 3, leaving 3. Now we have all prime numbers.

$135 = 27 \times 5$

$135 = 9 \times 3 \times 5$

$135 = 3 \times 3 \times 3 \times 5$

Once you find the prime factors of the second number, see which numbers they have in common. Circle and multiply them to get your GCF. If there are no prime factors in common, then the GCF is 1.

$3 \times 3 \times 3 = 27$   
GCF

Numbers in common:  
**3, 3, 3**

# GREATER THAN OR LESS THAN?

> " GREATER THAN"

< " LESS THAN"

= "EQUAL"

**Directions:** Solve the equations then write down the symbol that best compares each answer. Then write the answer in word form.

Example:

Ex.  $(232 \times 32)$   $>$   $(22 \times 150)$   
7424                      3300

Seven thousand, four hundred and twenty-four is greater than three thousand, three hundred.

1.  $\begin{array}{r} 539 \\ \times 223 \\ \hline \end{array}$   $\square$   $\begin{array}{r} 133 \\ \times 624 \\ \hline \end{array}$

---

---

---

---

2.  $\begin{array}{r} 439 \\ \times 173 \\ \hline \end{array}$   $\square$   $\begin{array}{r} 244 \\ \times 324 \\ \hline \end{array}$

---

---

---

---

3.  $\begin{array}{r} 453 \\ \times 513 \\ \hline \end{array}$   $\square$   $\begin{array}{r} 1223 \\ \times 154 \\ \hline \end{array}$

---

---

---

---

4.  $\begin{array}{r} 745 \\ \times 16 \\ \hline \end{array}$   $\square$   $\begin{array}{r} 394 \\ \times 85 \\ \hline \end{array}$

---

---

# Practice Finding The Variable #1

A variable represents the unknown number in the equation. For example,  $4 \times t = 12$ . The letter "t" represents the number which multiplies by 4 to equal 12. Find the value of each variable in these equations. See the example below.

$6 \times j = 30$

$j = 30 \div 6$

$j = 5$

$8 \times b = 32$

$b =$

$b =$

$9 \times u = 63$

$u =$

$u =$

$11 \times e = 55$

$e =$

$e =$

$22 \times k = 44$

$k =$

$k =$

$d \times 5 = 100$

$d =$

$d =$

$h \times 20 = 400$

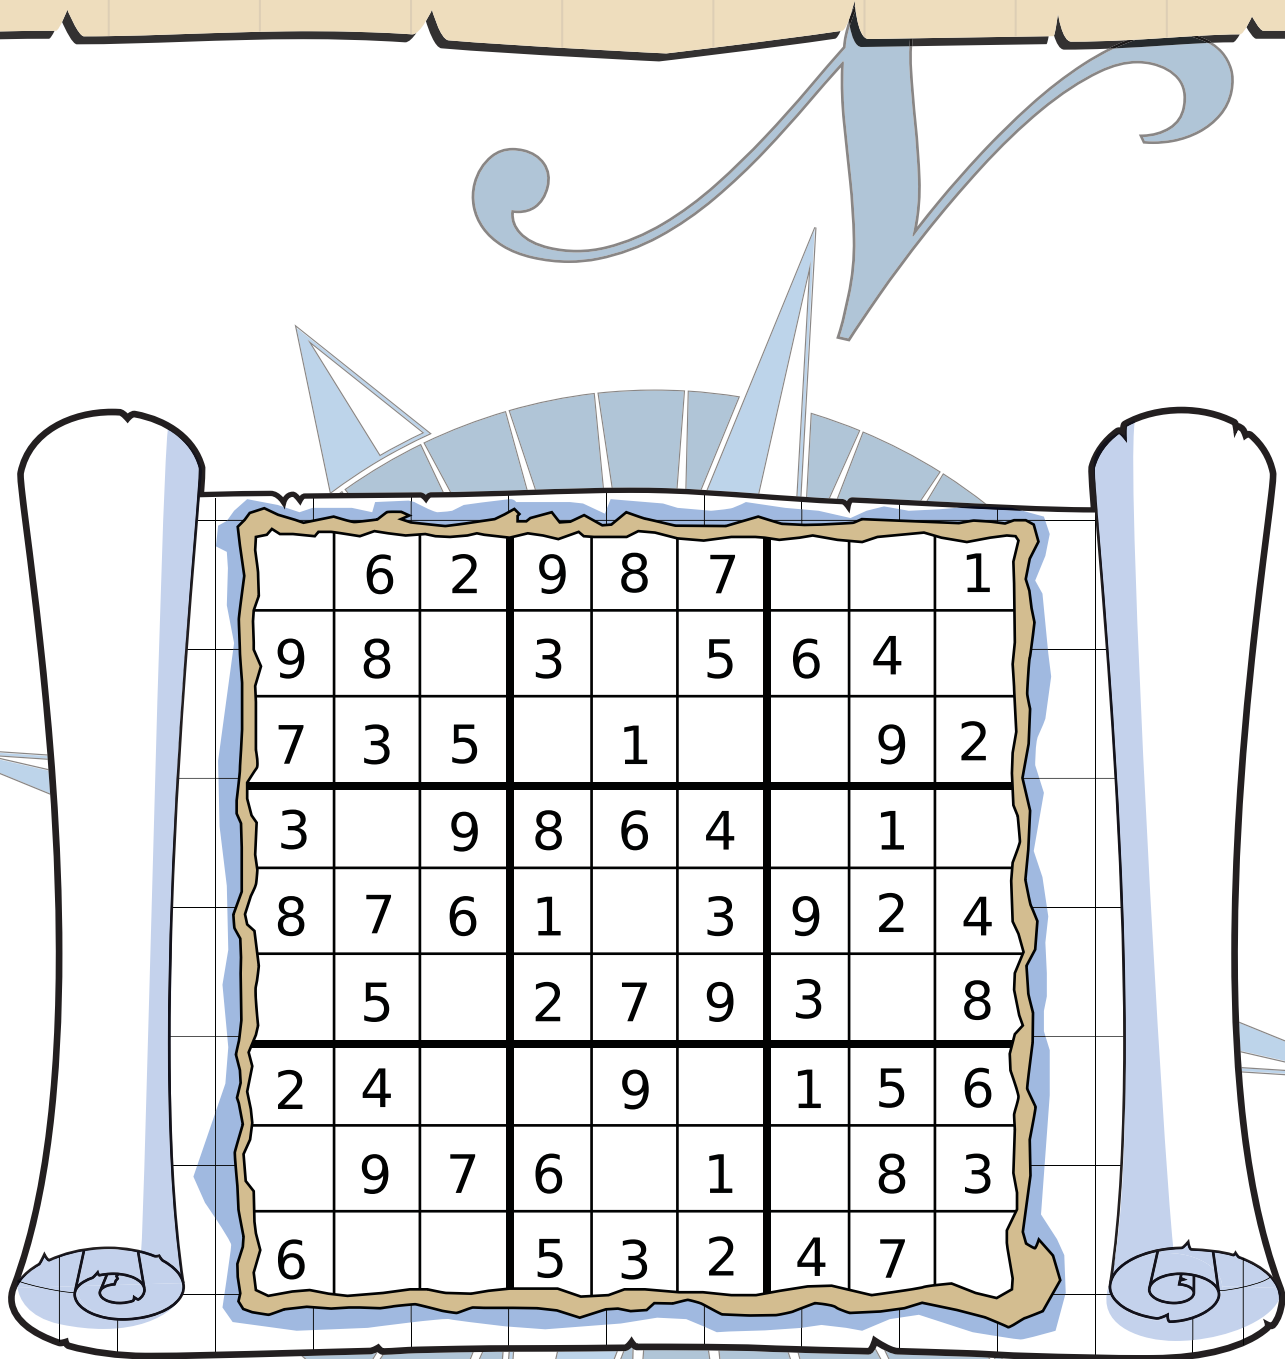

$h =$

$h =$

# SUDOKU ISLAND

Solve the Sudoku puzzle by filling in the blank spaces with numbers between 1 and 9. Make sure no numbers appear twice in the same row, column or 3x3 square.

**DIFFICULTY: MEDIUM**

# Math-Go-Round

**Multiplication | Difficulty:** ★★☆☆

Find a friend and practice your multiplication skills. Find two coins or game pieces and place them on the square labeled **START**. Choose one of the problems to solve and move your game piece clockwise around the board to that problem's answer.

Keep track of the number of corners you go around on each move. For each one, give yourself a point. The player with the most points at the end is the winner.

Keep score with the table below.

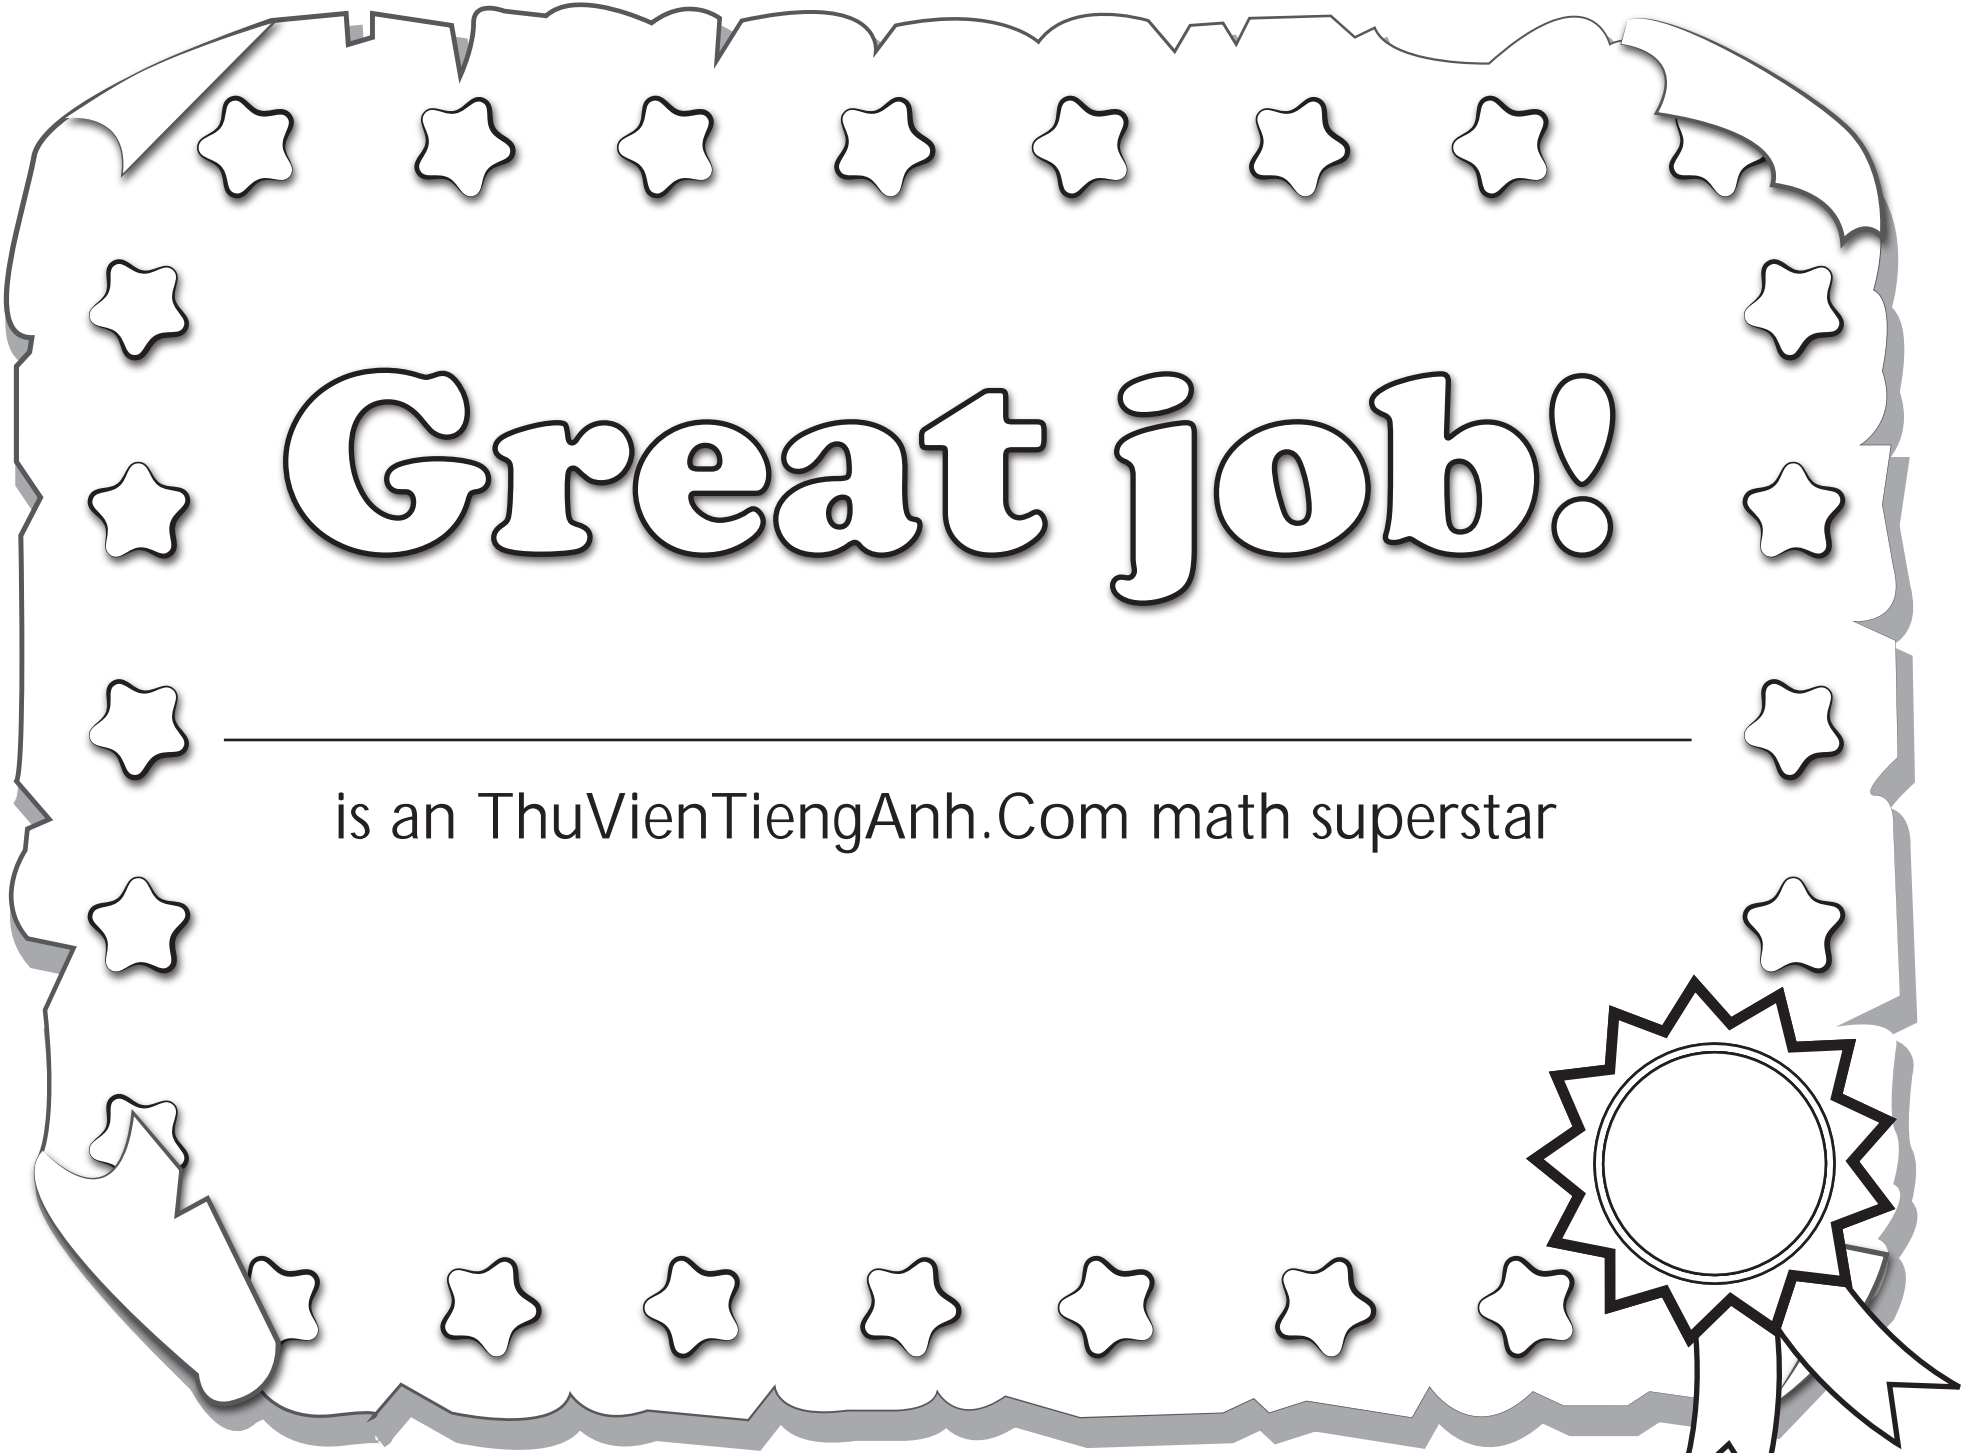

Player 1  
Player 2

Round 1		
Round 2		
Round 3		
Round 4		
Round 5		
Round 6		
Round 7		
Round 8		

**Total** \_\_\_\_\_

<b>START</b> +1 Point	456	2,107	140	169	+1 Point
840	$\begin{array}{r} 25 \\ \times 14 \\ \hline \end{array}$	$\begin{array}{r} 16 \\ \times 13 \\ \hline \end{array}$	$\begin{array}{r} 42 \\ \times 20 \\ \hline \end{array}$	$\begin{array}{r} 13 \\ \times 13 \\ \hline \end{array}$	850
1,820	$\begin{array}{r} 50 \\ \times 17 \\ \hline \end{array}$	$\begin{array}{r} 45 \\ \times 39 \\ \hline \end{array}$	$\begin{array}{r} 14 \\ \times 10 \\ \hline \end{array}$	$\begin{array}{r} 18 \\ \times 12 \\ \hline \end{array}$	208

## Division Duplication

Answer Sheet

4<sup>th</sup>  
Grade

There are 7 pairs of matching cards. Solve the equations then draw a line between symbols with the matching answers in the key below.

18 ÷ 3 = 6

35 ÷ 7 = 5

33 ÷ 3 = 11

49 ÷ 7 = 7

20 ÷ 4 = 5

36 ÷ 4 = 9

72 ÷ 8 = 9

12 ÷ 2 = 6

15 ÷ 5 = 3

22 ÷ 2 = 11

28 ÷ 7 = 4

27 ÷ 9 = 3

28 ÷ 4 = 7

36 ÷ 9 = 4

## Skill Practice 1

Finding the GCF

- ☛ The **greatest common factor (GCF)** is the largest whole number that divides evenly into multiple numbers. Look at the two numbers in each problem and find the greatest common factor between them. See the example below for a step by step process to finding the GCF.

### Example

$36$ $\begin{array}{c} 2 \\ 2 \\ 3 \\ 3 \\ 3 \end{array}$	$48$ $\begin{array}{c} 2 \\ 2 \\ 2 \\ 2 \\ 3 \end{array}$	$36 = 18 \times 2$ — 2 is a prime number and divides into 18 evenly 36 times. $36 = 9 \times 2 \times 2$ — 18 can be divided by 2, leaving 9. $36 = 3 \times 3 \times 2 \times 2$ — 9 can be divided by 3, leaving 3. Now we have all prime numbers. $48 = 24 \times 2$ $48 = 12 \times 2 \times 2$ $48 = 6 \times 2 \times 2 \times 2$ $48 = 3 \times 2 \times 2 \times 2 \times 2$
$\underline{2 \times 2 \times 3 = 12}$ GCF		Once you find the prime factors of the second number, see which numbers they have in common. Circle and multiply them to get your GCF. If there are no prime factors in common, then the GCF is 1. Numbers in common: <b>2, 2, 3</b>

$40$ $\begin{array}{c} 2 \\ 2 \\ 2 \\ 5 \end{array}$	$60$ $\begin{array}{c} 2 \\ 2 \\ 3 \\ 5 \end{array}$
$\underline{20}$ GCF	

$30$ $\begin{array}{c} 2 \\ 3 \\ 5 \end{array}$	$75$ $\begin{array}{c} 3 \\ 5 \\ 5 \end{array}$
$\underline{15}$ GCF	

$84$ $\begin{array}{c} 2 \\ 2 \\ 3 \\ 7 \end{array}$	$105$ $\begin{array}{c} 3 \\ 5 \\ 7 \end{array}$
$\underline{21}$ GCF	

$56$ $\begin{array}{c} 2 \\ 2 \\ 2 \\ 7 \end{array}$	$96$ $\begin{array}{c} 2 \\ 2 \\ 2 \\ 2 \\ 3 \end{array}$
$\underline{8}$ GCF	

$18$ $\begin{array}{c} 2 \\ 3 \\ 3 \end{array}$	$25$ $\begin{array}{c} 5 \\ 5 \end{array}$
$\underline{1}$ GCF	

$50$ $\begin{array}{c} 2 \\ 5 \\ 5 \end{array}$	$125$ $\begin{array}{c} 5 \\ 5 \\ 5 \end{array}$
$\underline{25}$ GCF	

$72$ $\begin{array}{c} 2 \\ 2 \\ 2 \\ 3 \\ 3 \end{array}$	$108$ $\begin{array}{c} 2 \\ 2 \\ 3 \\ 3 \end{array}$
$\underline{18}$ GCF	

$56$ $\begin{array}{c} 2 \\ 2 \\ 2 \\ 7 \end{array}$	$112$ $\begin{array}{c} 2 \\ 2 \\ 2 \\ 2 \\ 7 \end{array}$
$\underline{28}$ GCF	

# Answer Sheet

## Bull's Eye Multiply

Answer Sheet

Use multiplication to find the points awarded for hitting each zone. The outer red circle multiplies the number by 3 and the inner blue circle multiplies it by 7.

Look at the darts on the board.  
How many points were scored?

$$\underline{9} + \underline{56} + \underline{33} = \underline{98}$$

# Answer Sheet

## DIVISION WORD PROBLEMS

1. Billy receives \$15 every month for allowance. He puts \$7 of his allowance into a piggy bank until his piggy bank has \$119. How many months has he been saving part of his allowance?

$$119 \text{ (amount saved)} \div 7 \text{ (amount left from his allowance)} = 17 \text{ months}$$

It took Billy 17 months to save up \$119 in his piggy bank.

2. Miss Amy collected \$6 each from her students for their upcoming field trip. If all of her students went on the field trip she would collect \$192. How many students are in Miss Amy's class?

$$192 \text{ (total collected money)} \div 6 \text{ (collected per student)} = 32 \text{ students}$$

There are 32 students in Miss Amy's class.

3. Mr. Chong is also planning for his class to go on the same trip. He collects \$6 from each of his students too, but one of his students could only pay \$3 making his total \$219. How many students are in his class?

$$219 \text{ (total collected money)} + 3 \text{ (the missing due from one student)} = 222$$

$$222 \div 6 \text{ (collected per student)} = 37 \text{ students}$$

There are 37 students in Mr. Chong's class.

4. Kari gets \$20 every week for lunch money. She sets aside \$2 every school day. How many weeks did it take for her to save up \$65?

$$\$2 \text{ (allowance saved)} \times 5 \text{ (# school lunch days)} = \$10 \text{ (allowance saved in a week)}$$

$$\$65 \text{ (total saved)} \div \$10 \text{ (allowance saved in a week)} = 6.5 \text{ weeks round up to 7}$$

It took her 7 weeks to save 65 dollars.

5. Susan is selling raffle tickets for \$4. She collects a total of \$284. How many tickets did she sell?

$$\$284 \text{ (collected total)} \div \$4 \text{ (price per raffle ticket)} = 71 \text{ (tickets sold)}$$

Susan sold 71 tickets.

# Answer Sheet

## LEMONADE STAND MATH 5 ANSWERS

You and your friends run a lemonade stand everyday during the summer. You are in charge of keeping track of the volume of lemonade sold. Given the number of cups sold each day, use division to express the number of cups sold in gallons, quarts, and cups.

Follow the example below. Refer to the **conversion box** to convert your units correctly. Show and check your work.

### Conversion Box

Gal = Gallons  
Qt = Quarts  
C = Cups

1 Gal = 16 C  
1 Qt = 4 C

Mon.  
Cups sold: 19

1st: Find the number of gallons using division.

$$1 \text{ G} = 16 \text{ C} \quad 16 \overline{)19} \quad \text{R:3} \quad \underline{\quad 1} \text{ Gal}$$

2nd: Convert the remaining 6 cups into quarts. The remainder is the number of cups left over:

$$1 \text{ Q} = 4 \text{ C} \quad 4 \overline{)3} \quad \text{R:3} \quad \underline{\quad 0} \text{ Qt} \quad \underline{\quad 3} \text{ C}$$

Tue. Cups sold: 23

1 Gal 1 Qt 3 C

Wed. Cups sold: 50

3 Gal 0 Qt 2 C

Thurs. Cups sold: 44

2 Gal 3 Qt 0 C

Fri. Cups sold: 170

10 Gal 2 Qt 2 C

Sat. Cups sold: 134

8 Gal 1 Qt 2 C

Sun. Cups sold: 115

7 Gal 0 Qt 3 C

$\frac{12}{\text{GCF}}$	

# Answer Sheet

## GREATER THAN OR LESS THAN?

> " GREATER THAN"

< " LESS THAN"

= "EQUAL"

**Directions:** Solve the equations then write down the symbol that best compares each answer. Then write the answer in word form.

Example:

Ex.  $(232 \times 32)$   $>$   $(22 \times 150)$   
 $7424$   $3300$

Seven thousand, four hundred and twenty-four is greater than three thousand, three hundred.

1.  $\begin{array}{r} 539 \\ \times 223 \\ \hline 120,197 \end{array}$   $>$   $\begin{array}{r} 133 \\ \times 624 \\ \hline 82,992 \end{array}$

One hundred twenty thousand, one hundred and ninety-seven is greater than eighty-two thousand, nine hundred and ninety-two.

2.  $\begin{array}{r} 439 \\ \times 173 \\ \hline 75,947 \end{array}$   $<$   $\begin{array}{r} 244 \\ \times 324 \\ \hline 79,056 \end{array}$

Seventy-five thousand, nine hundred forty-seven is less than seventy-nine thousand, and fifty-six.

3.  $\begin{array}{r} 453 \\ \times 513 \\ \hline 232,389 \end{array}$   $>$   $\begin{array}{r} 1223 \\ \times 154 \\ \hline 188,342 \end{array}$

Two hundred, thirty-two thousand, three hundred and eighty-nine is greater than one hundred eighty-eight thousand, three hundred and forty-two.

4.  $\begin{array}{r} 745 \\ \times 16 \\ \hline 11,920 \end{array}$   $<$   $\begin{array}{r} 394 \\ \times 85 \\ \hline 33,490 \end{array}$

Eleven thousand, nine hundred and twenty is less than thirty-three thousand, four hundred and ninety.

# Answer Sheet

## Answer Sheet

# Practice Finding The Variable #1

Math  
Multiplication

A variable represents the unknown number in the equation. For example,  $4 \times t = 12$ . The letter "t" represents the number which multiplies by 4 to equal 12. Find the value of each variable in these equations. See the example below.

$6 \times j = 30$

$j = 30 \div 6$

$j = 5$

$8 \times b = 32$

$b = 32 \div 8$

$b = 4$

$9 \times u = 63$

$u = 63 \div 9$

$u = 7$

$11 \times e = 55$

$e = 55 \div 11$

$e = 5$

$22 \times k = 44$

$k = 44 \div 22$

$k = 2$

$d \times 5 = 100$

$d = 100 \div 5$

$d = 20$

$h \times 20 = 400$

$h = 400 \div 20$

$h = 20$
