## Plot a dot, Draw a line, What do you find?

Can you find the hiddden image? Plot the coordinates in order, draw a line between each one, and see what figure appears! Remember, the first number is on the $X$ axis and the second number is on the $Y$ axis.

## Where are they?: Tell the position

Your friend is new in town. Tell her positions of a store, bank, and school using $X$ and $Y$ Coordination. Write the coordinates of each place next to the position (look at the example).
Then, answer questions below.
Review: The first number refers to $X$ coordinate. The second number refers to $Y$ coordinate.

What is the $x$-coordinate of the school?
What is the $y$-coordinate of the park?
Mark on a grid a position of a train station which is $(3,2)$.
Mark on a grid a position of a community center which is $(6,3)$.

## Traveling to the South Pole: Practice Coordinates and Perimeter

The penguin parents are traveling to the South Pole to pick up their baby, stopping at each point on the grid along the way. Then together, the three of them will go back home in a different route. See how far their route is by finding the distance between the coordinates (see examples below). Review: The first number refers to $X$ coordinate. The second number refers to $Y$ coordinate.

Example:
Day 1: Distance between home $(1,5)$ to Day 1 stop $(1,4)$. Subtract difference of $Y$-value of each location. $Y$ value of home $=5, Y$ value of Day 1 stop $=4$.
Therefore, the distance is 5-4=1. Then draw a line from each point and write 1 .
Day 2: Distance between Day 1 stop $(1,4)$ to Day 2 stop $(4,4)$. Subtract difference of $X$-value of each location. $X$ value of Day 2 stop $=4, X$ value of Day 1 stop $=1$.
Therefore, the distance is 4-1=3. Then draw a line from each point and write 3.

## A Sea of Letters: Practice Coordinates

Navigate through the sea of letters to find out in what city your ship will land. Collect the letters according to the order of the coordinates and spell out the name of the destination.

## Working On The Farm: Practice Coordinates

Help farmers Bob and Ted gather their animals by drawing a pen for them using coordinates below. Then answer the questions at the bottom of the page.

## Flowers Everywhere: Practice Coordinates

Help Emma pick flowers in her garden to make a bouquet. Using the coordinates below to find out which flowers she should pick. Then answer the questions at the bottom of the page.

1. Which kind of flowers did Emma pick the most of?
2. If she wants an equal number of tulips and sunflowers, which coordinates she should pick?
3. What coordinates have plants that are not fully grown? $\qquad$

## What's for Dinner?: Practice Coordinates

Spell out the mystery dinner by finding the ingredient that corresponds to each set of coordinates below.

Recipe: $\qquad$

Track the course of a current hurricane in the Atlantic Ocean. You can get storm coordinates by checking the National Weather Service's data at http://www.nhc.noaa.com

|  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |

## HOW TO TRACK A HURRICANE:

1. Determine the latitude of the storm and locate it on the map. Latitude measures how far north or south a location is from the Equator.
2. Determine the longitude, and locate it on the map. Longitude measures how far east or west a location is from the Prime Meridian.
3. Draw an icon representing a hurricane or a tropical storm.
4. Measure trends over dates, times and record data about wind, directional movement, and speed on the data chart.
5. Repeat steps 1-4 as the storm moves.

TIP: Use a different color for each uniquely named storm if more than one storm is forming in the Atlantic Ocean.

## WHAT IS A HURRICANE?:

A hurricane is a storm system characterized by a large low-pressure center and numerous thunderstorms that produce strong winds and heavy rain. Hurricanes strengthen when water evaporated from the ocean is released as the saturated air rises, resulting in condensation of water vapor contained in the moist air.

WHEN DO HURRICANES FORM?: In the Northern Atlantic Ocean, a distinct hurricane season occurs from June 1 to November 30, sharply peaking from late August through September.

## Ordered Pairs

$\qquad$
A pair of perpendicular lines called axes intersect at 0 for each line. A given point on the plane is located by using an ordered pair of numbers called coordinates. The first number ("x" value) indicates how far to travel from the origin horizontally along the $x$-axis, and the second number ("y" value) indicates how far to travel vertically along the $y$-axis.

Using the coordinate grid of Geo City, answer the following questions:

1. What is the ordered pair for the location of the police station?
2. Which location can be found at coordinates (6, 4) ? $\qquad$
3. Which location can be found at coordinates $(-5,-2)$ ?
4. What is the ordered pair for the location of the school?
5. Which location can be found at coordinates $(-4,5)$ ?
6. What is the ordered pair for the location of the library?

## Directions:

1. Use tape to place the five pieces from page 1 onto your board. (Pieces must be placed either horizontally or vertically.)
2. Once both detectives are ready, take turns guessing coordinates ("I Spy -2, 5!") to find your opponents pieces. You and your opponent must reply with "Caught me!" or "Missed me!"
3. If you hit your opponent's mark, mark that coordinate with a red dot on "Opponent's Board." If you miss your opponent's mark, mark that coordinate with a black dot.
4. If your opponent hits one of your marks, mark that coordinate with a red dot on "Your Board."
5. Once a piece has been fully marked, you or your opponent must say "You've discovered my [item]!"
6. Once all five of an opponent's pieces are found, that player has found the spy!

## Where are they?: Tell the position

Your friend is new in town. Tell her positions of a store, bank, and school using $X$ and $Y$ Coordination. Write the coordinates of each place next to the position (look at the example).
Then, answer questions below.
Review: The first number refers to $X$ coordinate. The second number refers to $Y$ coordinate.

What is the x -coordinate of the school? 4

What is the y -coordinate of the park? 0
Mark on a grid a position of a train station which is ( 3,2 ).
Mark on a grid a position of a community center which is (6, 3).

## Traveling to the South Pole: Practice Coordinates and Perimeter

The penguin parents are traveling to the South Pole to pick up their baby, stopping at each point on the grid along the way. Then together, the three of them will go back home in a different route. See how far their route is by finding the distance between the coordinates (see examples below).
Review: The first number refers to $X$ coordinate. The second number refers to $Y$ coordinate.

## Example:

Day 1: Distance between home $(1,5)$ to Day 1 stop $(1,4)$. Subtract difference of $Y$-value of each location. $Y$ value of home $=5, Y$ value of Day 1 stop $=4$.
Therefore, the distance is $5-4=1$. Then draw a line from each point and write 1 .
Day 2: Distance between Day 1 stop $(1,4)$ to Day 2 stop $(4,4)$. Subtract difference of $X$-value of each location. $X$ value of Day 2 stop $=4, X$ value of Day 1 stop $=1$.
Therefore, the distance is 4-1=3. Then draw a line from each point and write 3 .

Day 3: $(4,1)$

$$
4-1=3
$$

Day 4: $(3,1)$
Day 5: $(3,0)$
$4-3=1$

$$
1-0=1
$$

Day 6: $(6,0)$

$$
6-3=3
$$

Day 7: $(6,3)$
Day 8: $(6,5)$
Day 8 to Home:

$$
5-3=2
$$

$$
6-1=5
$$

## Working On The Farm: Practice Coordinates

Help farmers Bob and Ted gather their animals by drawing a pen for them using coordinates below. Then answer the questions at the bottom of the page.

## Bob's

1. $(1,5)$
2. $(0.5,4)$
3. $(1,3)$
4. $(0.5,2)$
5. $(0.5,1)$
6. $(1.5,0.5)$
7. $(2,1)$
8. $(3,1)$
9. $(4,1.5)$
10. $(4.5,2)$
11. $(4,3)$
12. $(2.5,4)$
13. $(2.5,5)$

## Ted's

1. $(3,0.5)$
2. $(5,0)$
3. $(6,1)$
4. $(6,5)$
5. $(4,5)$
6. $(3,4)$
7. $(4,3)$
8. $(5,3)$
9. $(5,2)$
10. $(4,1)$

Who has more pigs? Bob
Who has more chickens? Ted
Who has the most animals? They each have 10 animals.

## Flowers Everywhere: Practice Coordinates

Help Emma pick flowers in her garden to make a bouquet. Using the coordinates below to find out which flowers she should pick. Then answer the questions at the bottom of the page.

1. Which kind of flowers did Emma pick the most of? TUlips
2. If she wants an equal number of tulips and sunflowers, which coordinates she should pick?
(answers will Vary)
3. What coordinates have plants that are not fully grown?

## Ordered Pairs

Name: $\qquad$

A pair of perpendicular lines called axes intersect at $O$ for each line. A given point on the plane is located by using an ordered pair of numbers called coordinates. The first number ("x"value) indicates how far to travel from the origin horizontally along the x-axis, and the second number ("y" value) indicates how far to travel vertically along the $y$-axis.

Using the coordinate grid of Geo City, answer the following questions:

1. What is the ordered pair for the location of the police station?
2. Which location can be found at coordinates $(6,4)$ ?
3. Which location can be found at coordinates ( $-5,-2$ )?
4. What is the ordered pair for the location of the school?
5. Which location can be found at coordinates $(-4,5)$ ?
6. What is the ordered pair for the location of the library?

## Shapes on a Coordinate Grid

Plot each group of points on the coordinate grid and label with the corresponding letter:
A: $(1,1)$
D: $(4,-1)$
$\mathrm{H}:(-3,-2)$
L: $(-2,7)$
B: $(7,1)$
E: $(6,-4)$
I: $(-3,-5)$
M: $(-2,4)$
C: $(7,7)$
F. $(4,-7)$
J: $(-8,-5)$
$\mathrm{N}:(-7,4)$
G: $(2,-4)$
K: $(-6,-2)$
O: $(-7,7)$

Connect the points in order. Make sure to connect Point $C$ back to Point $A$, Point $D$ to Point G, Point $H$ to Point $K$, and Point $L$ to Point $O$.

## Parallel and Perpendicular Lines

Parallel lines are distinct lines lying in the same plane that never intersect each other. Perpendicular lines are lines that intersect each other at right angles.

Parallel lines

Perpendicular lines

In each quadrant, determine if the two line segments are parallel, perpendicular, or neither. Explain why.

Quadrant 1: Line $A B$ is $\qquad$ perpendicular to Line CD because they cross at right angles

Quadrant 1: Line EF is $\qquad$ to Line CH because $\qquad$ they will never cross to Line KL because they will cross
Quadrant 1: Line IJ is $\qquad$ not parallel

Quadrant 1: Line MN is not perpendicular to Line OP because they don't cross at right angles
