## Base and Volume

Sometimes the length and width have already been multiplied together for you. When this happens, it is called the base. When you know the value of the base, all you have to do is multiply the base times the height to find the volume of the object.
base $=$ length $x$ width
volume $=$ base $\times$ height
Directions: Find the volume of each object using the base and height.

## Example:

1.

base $=300 \mathrm{~cm}^{2}$
base $=12 \times 6$, so the base is $\mathbf{7 2} \mathbf{~ c m}^{\mathbf{2}}$
To find the volume, multiple the base times the height.
$\mathbf{V}=$ base $\times$ height $\quad V=72 \times 8 \quad V=576 \mathbf{c m}^{\mathbf{3}}$

2.

base $=20 \mathrm{~cm}^{2}$

4.

base $=56 \mathrm{~cm}^{2}$

$=\frac{504 \mathrm{~cm}^{3}}{\text { (volume) }}$
5.

1 cm
base $=3 \mathrm{~cm}^{2}$
$\frac{3}{\text { (base) }}$
X

(height)
$=$ $\qquad$
