

How Many Eyes Do Honey Bees Have?

Did you know that bees have five eyes? They have two compound eyes and three tiny ocelli eyes.

The two compound eyes on a bee are made up of thousands of small lenses, or facets. These small facets help form one complete picture.

The three small eyes on top of the bee's head are called ocelli. This word means "little eye" in Latin. These eyes are used for navigation and help bees stay stable while they are flying in the air.

Bees can't see red like humans do. Instead, they can see ultraviolet light, which helps them identify flowers to pollinate.

Creepy Facts:

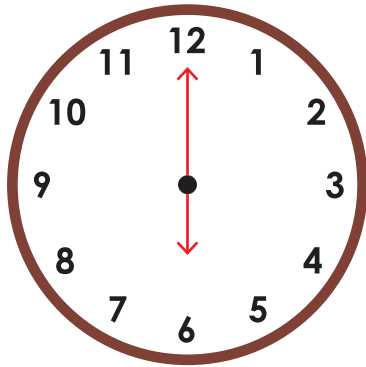

Bees have hair growing out of their eyes!

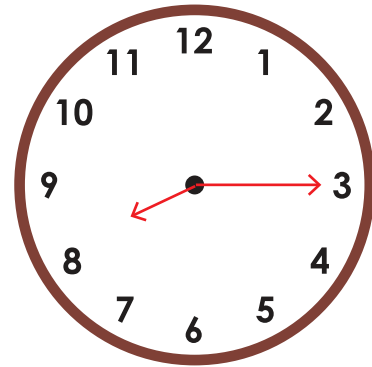

Help Sandy Bee on Time

Sandy, a baby bee, needs to follow the Queen Bee's instructions if he wants to be on time for the party. Help him draw the hands on the clock correctly so he reaches the party on time.

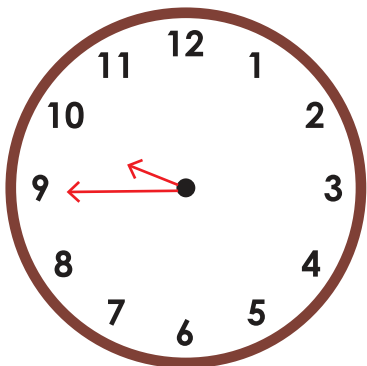

Sandy needs to be up in the morning at 6:00 AM.

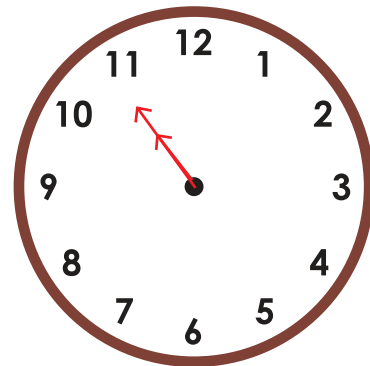

He has to eat his breakfast at 8:15 AM.

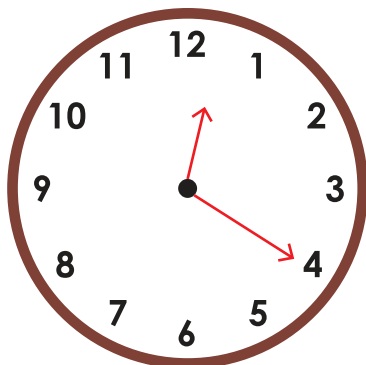

His flying lessons start at 9:45 AM.

He gets a break at 10:50 AM.

His lunch time begins at 12:20 PM.

He has to get dressed and be ready at 7:05 PM to get picked up for the party.
