

**ANSWERS****Characteristics of Spheres**

A **sphere** is a round 3-dimensional shape that has:

- No sides
- No corners
- All points at an equal distance from the center

**Part 1 - Is It a Sphere?**

**Directions:** Look at the shapes and decide whether or not each is a sphere. Then, explain how you know. Be sure to mention the characteristics!

Shape	Is it a sphere?	Explanation
	No	This shape is not a sphere because it has sides and corners. A sphere does not have either of those. It is also not round like a sphere.
	No	This shape is not a sphere because it has sides and corners, and a sphere does not have those things. It is not round like a sphere.
	No	This shape is not a sphere because it has sides and corners, which a sphere does not have. Also, this shape is two-dimensional while a sphere is three-dimensional.
	Yes	This shape is a sphere because it has no sides or corners. All points are an equal distance from the center. It is a round three-dimensional shape.

**Part 2 - Compare Shapes**

**Directions:** Compare the shapes and answer the questions that follow.

What do the two shapes have in common? What is different about the two shapes?

**Both shapes are circular, or round. Both shapes have no sides or edges. In both shapes, all points are an equal distance from the center. However, the circle is a two-dimensional shape, while the sphere is a three-dimensional shape.**
