

Circle Ten and Solve

Putting things in groups of ten makes adding easy! Use the pictures to help you solve the addition problems. Then change the problem into a $10 + \underline{\quad} = \underline{\quad}$ problem.

Example:

$$9 + 8$$

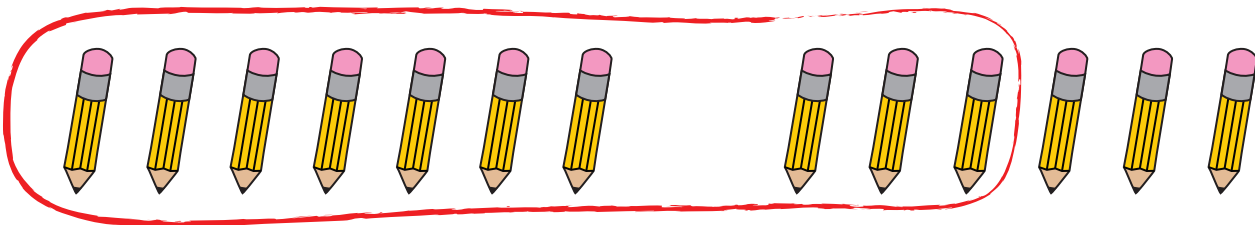

How many are left after you circle 10? 7

$$10 + \underline{7} = \underline{17}$$

Now you try!

$$7 + 6$$

How many are left after you circle 10? 3

$$10 + \underline{3} = \underline{13}$$
