

Finding Exterior Angles of Triangles

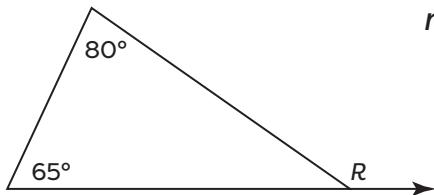

The **Exterior Angle Theorem** states that the measure of an exterior angle of a triangle is equal to the sum of the two opposite interior angles.

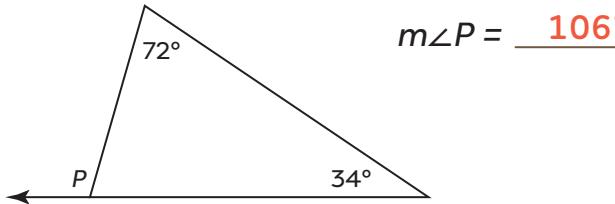

$$m\angle A + m\angle B = m\angle D$$

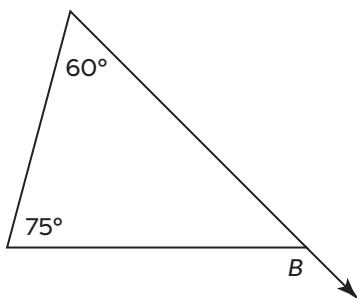

Apply it! Find each missing exterior angle. Use the information above to help you!

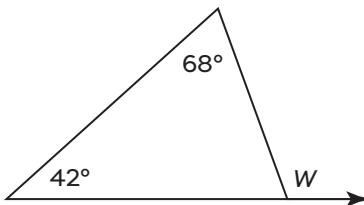

$$m\angle R = \underline{\hspace{2cm}145^\circ}$$

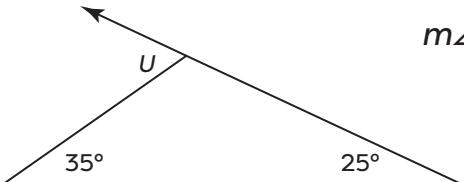

$$m\angle P = \underline{\hspace{2cm}106^\circ}$$

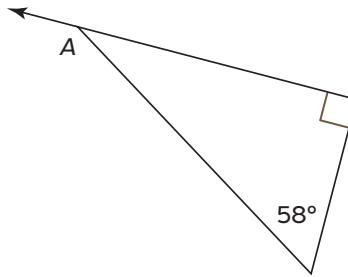

$$m\angle B = \underline{\hspace{2cm}135^\circ}$$

$$m\angle W = \underline{\hspace{2cm}110^\circ}$$

$$m\angle U = \underline{\hspace{2cm}60^\circ}$$

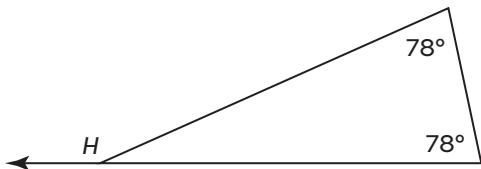

$$m\angle A = \underline{\hspace{2cm}145^\circ}$$

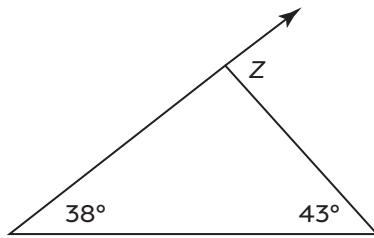

Finding Exterior Angles of Triangles

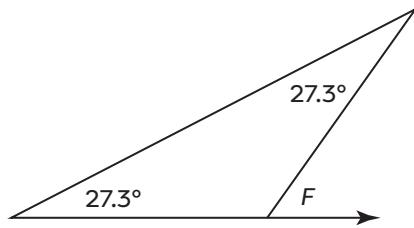

Keep going! Find each missing exterior angle.

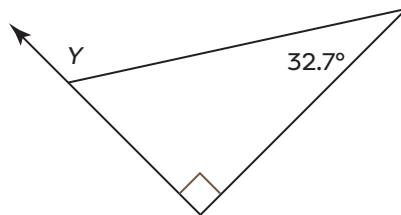

$$m\angle H = \underline{156^\circ}$$

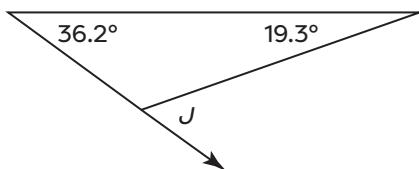

$$m\angle Z = \underline{81^\circ}$$

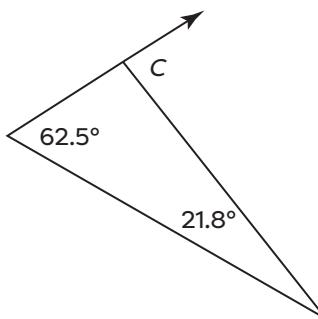

$$m\angle F = \underline{54.6^\circ}$$

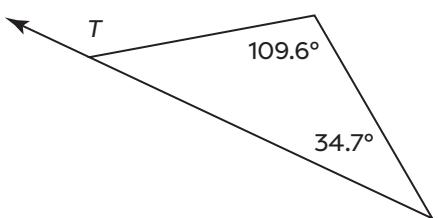

$$m\angle Y = \underline{122.7^\circ}$$

$$m\angle J = \underline{55.5^\circ}$$

$$m\angle C = \underline{84.3^\circ}$$

$$m\angle T = \underline{144.3^\circ}$$

$$m\angle G = \underline{151.1^\circ}$$
