

Fraction Math: Addition and Subtraction

If the fractions both have the same **denominator**, it does not change.

$$\frac{1}{4} + \frac{1}{4} = \frac{2}{4}$$

Only add the top **numerator**.

This rule is the same for subtraction.

$$\frac{3}{4} - \frac{1}{4} = \frac{2}{4}$$

Add or subtract the problems below.

$$\frac{2}{4} + \frac{1}{4} = \frac{3}{4}$$

$$\frac{4}{8} + \frac{2}{8} = \frac{6}{8}$$

$$\frac{2}{3} - \frac{1}{3} = \frac{1}{3}$$

$$\frac{3}{7} + \frac{2}{7} = \frac{5}{7}$$

$$\frac{5}{6} - \frac{1}{6} = \frac{4}{6}$$

$$\frac{4}{9} + \frac{3}{9} = \frac{7}{9}$$

$$\frac{4}{5} - \frac{1}{5} = \frac{3}{5}$$

$$\frac{6}{7} - \frac{1}{7} = \frac{5}{7}$$

$$\frac{4}{12} + \frac{2}{12} = \frac{6}{12}$$

$$\frac{4}{10} + \frac{1}{10} = \frac{5}{10}$$

$$\frac{8}{16} + \frac{2}{16} = \frac{10}{16}$$

$$\frac{2}{20} + \frac{7}{20} = \frac{9}{20}$$

$$\frac{6}{15} + \frac{2}{15} = \frac{8}{15}$$

$$\frac{10}{18} - \frac{2}{18} = \frac{8}{18}$$

$$\frac{4}{10} + \frac{2}{10} = \frac{6}{10}$$

$$\frac{10}{25} + \frac{5}{25} = \frac{15}{25}$$

$$\frac{6}{30} + \frac{7}{30} = \frac{13}{30}$$
