

## Venn Diagram

## Answers

Compare and contrast freshwater and marine biomes. Record the similarities in the center, where the two circles overlap. Record the differences in the outer parts of the circles.

### Freshwater

- Less than 1% salt
- Less than 1% of the Earth's water is in freshwater lakes
- Moss may grow in or near freshwater bodies
- Many freshwater organisms depend on moss for food

### Marine (Saltwater)

- Support large and small animals
  - Types of organisms depend on temperature, depth, movement of water
  - Animals depend on water for food and survival
  - Plants also depend on unique conditions of biome
- More than 1% salt
  - Very large bodies of water
  - Algae supply most of the world's oxygen
  - Evaporation of marine water provides rainwater, snow, and fresh water for lakes and streams.
