

ANSWERS**Alphabet Symmetry**

A shape has **symmetry** when two sides look the same. A shape is symmetrical if it can be folded in half and the two sides are mirror images of each other.

A line of **symmetry** is a line that separates the shape into two parts that are the same shape and size.

Directions: Determine if each letter has a line of symmetry. If it has a line of symmetry, draw it and write **Yes** on the line. If it does not have a line of symmetry, write **No** on the line. An example is shown below.

Example:

Symmetry? Yes
