

# Give Me 5

Fix each math problem by inserting a 5 in the correct place.

Use #1 as an example. Before inserting the 5, it read  $1 \times 4 = 60$ .

By adding a 5, you could change it to  $15 \times 4 = 60$ , or  $1 \times 45 = 60$ .

Only the first is correct, so the 5 belongs on the first line, as shown below.

1.  $1\underline{5} \times 4\underline{\quad} = 60$

2.  $2\underline{5} \times \underline{\quad}4 = 100$

3.  $3\underline{5} - 2\underline{\quad} = 33$

4.  $5\underline{\quad} + 2\underline{5} = 30$

5.  $1\underline{5} \times \underline{\quad}3 = 45$

6.  $6\underline{5} - 7\underline{\quad} = 58$

7.  $9\underline{\quad} + \underline{5}7 = 66$

8.  $3\underline{5} \times 2\underline{\quad} = 70$

9.  $4\underline{5} \div 3\underline{\quad} = 15$

10.  $7\underline{5} - 8\underline{\quad} = 67$

11.  $9\underline{\quad} + 3\underline{5} = 44$

12.  $8\underline{5} + 9\underline{\quad} = 94$

13. <sup>both are correct</sup>  
 $2\underline{\quad} \times 2\underline{\quad} = 50$

14.  $6\underline{5} - 9\underline{\quad} = 56$

15.  $7\underline{\quad} + 5\underline{5} = 62$

16.  $3\underline{5} \div 7\underline{\quad} = 5$

17.  $8\underline{\quad} + 4\underline{5} = 53$

18.  $5\underline{5} + 6\underline{\quad} = 61$

19.  $2\underline{5} \div 1\underline{\quad} = 25$

20.  $2\underline{5} \times 3\underline{\quad} = 75$

21.  $6\underline{5} \div 5\underline{\quad} = 13$

22.  $9\underline{5} - 6\underline{\quad} = 89$

23.  $1\underline{\quad} \times 2\underline{5} = 25$

24.  $6\underline{\quad} \times 2\underline{5} = 150$
