

Name: _____

Date: _____

Graph it! Ordered Pairs

Use the function tables to find the ordered pairs. Then plot each ordered pair on the coordinate plane.

Rule: $y = x + 3$

x	y
1	4
2	5
3	6
4	7
5	8

Ordered Pairs

(1, 4)

(2, 5)

(3, 6)

(4, 7)

(5, 8)

Rule: $y = 3x$

x	y
1	3
2	6
3	9
4	12
5	15

Ordered Pairs

(1, 3)

(2, 6)

(3, 9)

(4, 12)

(5, 15)

Compare the two graphs above. What differences do you notice? Possible answer: The graph for function $y=3x$ is steeper than the graph for function $y=x+3$
