

How Do You Know They're Equivalent?

Directions: Determine how you know that the pictures show equivalent fractions. Complete the sentence stems with your reasoning. *Answers will vary, but may include:*

1.

Explanation: The fractions are equivalent because the first fraction shows $\frac{3}{4}$ and the second
fraction shows $\frac{6}{8}$. The relationship between both the numerators and denominators is that
you multiply by 2.

2.

Explanation: The fractions are equivalent because the first fraction is $\frac{2}{3}$ and the second
fraction is $\frac{4}{6}$. If you double both the numerator and denominator in $\frac{2}{3}$, the fraction is
 $\frac{4}{6}$.

3.

Explanation: The fractions are equivalent because the pictures represent $\frac{2}{4}$ and $\frac{8}{16}$. If you
divide 8 by 4, the numerator is 2. If you divide 16 by 4, the denominator is 4
