

Multiplication:

Oh What Fun it is to Add!

Robo-5 is going sledding with his family. It's very cold outside, so he wants to make sure everyone has mittens for their fun adventure.

1. On the first day, Robo-5 went sledding with his little brother, his mom and his best friend. How many total mittens will Robo-5 and his family need to bring to go sledding? First, draw a picture to show how many mittens Robo-5 and his family will need:

The drawing should represent 8 mittens
or 4 pairs of mittens (for 4 robots).

Now, use repeated addition to show the total number of mittens.

Hint: Mittens come in pairs of 2 and don't forget to bring a pair for Robo-5!

$$2 + 2 + 2 + 2 = 8 \text{ mittens}$$

2. On the second day, Robo-5 went sledding with his older sister and his dad. First, draw a picture to show how many mittens Robo-5 and his family will need:

The drawing should represent 6 mittens
or 3 pairs of mittens (for 3 robots).

Now, use repeated addition to show the total number of mittens.

Hint: Mittens come in pairs of 2 and don't forget to bring a pair for Robo-5!

$$2 + 2 + 2 = 6 \text{ mittens}$$
