

# Percent and Fraction #1

Turn percent into fraction. Firstly, write a percent that is divided by 100. Then simplify the fraction. Show your work.

*Example:*  $50\% = \frac{50}{100} = \frac{1}{2}$

14  
20  
35%  
50  
72%  
100  
12%

$$35\% = \frac{35}{100} = \frac{7}{20}$$

$$5\% = \frac{5}{100} = \frac{1}{20}$$

$$60\% = \frac{60}{100} = \frac{3}{5}$$

$$24\% = \frac{24}{100} = \frac{6}{25}$$

$$78\% = \frac{78}{100} = \frac{39}{50}$$

$$86\% = \frac{86}{100} = \frac{43}{50}$$

$$50\% = \frac{50}{100} = \frac{1}{2}$$

$$45\% = \frac{45}{100} = \frac{9}{20}$$

$$10\% = \frac{10}{100} = \frac{1}{10}$$

$$12\% = \frac{12}{100} = \frac{3}{25}$$

## Challenge!

$$150\% = \frac{150}{100} = \frac{3}{2}$$

$$120\% = \frac{120}{100} = \frac{6}{5}$$
