Quotes as Evidence #2

Choose a quote from the text that supports each of the statements below. Remember to use quotation marks when you write each quote.

Example: The invention of the television was made possible through the discoveries of many people.

"The television was not invented by just one person; many people throughout history contributed ideas and inventions to make TV what it is today."

1. People tried using electricity, radio waves, and light to transmit pictures.

"Over time people experimented with the idea of mixing electricity and radio to see what would happen. This was the starting point and the beginning of the invention of television."

2. Before television got its name, it was known by other names.

"He called this device 'Radiovision,' which he preferred over the name television."

3. Some of the inventors who were involved in developing television technology were influenced by other people's discoveries.

"Inspired by Nipkow, an American inventor named Charles Jenkins invented the first mechanical television system in 1923."

4. When it was first invented, television did not show color pictures.

"Black-and-white TV was the standard, with color television showing up much later."
