Simple	e Machines	9 Astronge
In ancient Greece a scientist named Are with the idea that there are simple machines we to make work easier. These machines could cha of movement and could lessen the amount of we moving things. Later, scientists and artists like Da Vinci advanced this idea and came up with simple machines we have today:	hich can be used ange the direction vork needed for Galileo and	Archimedes
pulley	EL	- 10 10
screw wheel and axle wedge lever	Galileo	
inclined plane		
Almost all modern machines use one or more o six simple machines.	f these	da Vinci
<b>Directions:</b> Read the descriptions of the sin and match them to the correct image.	mple machines	<b>a</b> .
<ul> <li><b>1.</b> A <b>pulley</b> uses grooved wheels and ropes/chains to raise, lower, or move a load by pulling on the rope.</li> </ul>	b.	scissors c.
<ul> <li><b>2.</b> A wheel, when combined with a rod through its center as an axle, can be f used to lift or move loads.</li> </ul>	flag pole	hammer
<b>3.</b> A <b>wedge</b> is an object with a slanted edge which is sharp. It can be used <b>a</b> to cut or push two objects apart.		LITT Ve
<b>4.</b> A <b>lever</b> is a bar that rests on a support, called a fulcrum, and can be used to lift or move loads.	d. [	ightbulb
<b>5.</b> An <b>inclined plane</b> is any slanted surface that is used to connect a lower surface to a higher one. Heavy objects slide up the surface.	d	f.
<b>6. Screws</b> are special kinds of inclined planes that are wrapped around a pole, which holds things together or lifts things.	e	bicycle
