1. If all stude	ents in the class v	oted, how n	nany students a	are there in the	class?42
2. What is th	e most popular t	type of musi	c? Pop		
3. How many	y more people fa	vor hip hop	over classical?	9	
4. Think abou	ut these question	ns and write	your predictio	ns.	
- 16 th					
			-		raph would change?
	tegory.				ory. It depends
b.How do you think the graph would change if the new category was opera? Sample response: That new category would probably have zero votes and the rest					
	y the same.				
	ıt if the new cate				
				_	egory.

5. What if there were four kids who were absent and didn't vote, and when they came back and
voted their favorite types of music weren't listed as a choice. What are some of the ways we
could represent their choices?
You could make a category called "other" or make new bars representing their choices.
6. In the graph, each horizontal line makes the bar taller by one vote. If each line represented
TWO students' votes, how would that change the graph?
The bars would be shorter.
7.11-
7. How could an odd number be represented if each line represents two votes?
You could extend the bar half way between two lines.
8. If you were going to do a follow-up survey, what question might you ask to get more information about favorite music?
Sample responses:
Who is your favorite singer?
What is your favorite radio station?
Do you listen to the same music your parents/caregivers listen to?
How do you learn about new songs?
9. Write two conclusions you can make from this graph.
a. Classical and soul are the least favorite types of music in this class.
b. Hip hop and pop are by far the most popular types of music.
