

X and Y Coordinates

What is an X and Y coordinate?

When a set of numbers are given, the first number is the X (plot horizontally) and the second number is the Y (plot vertically).

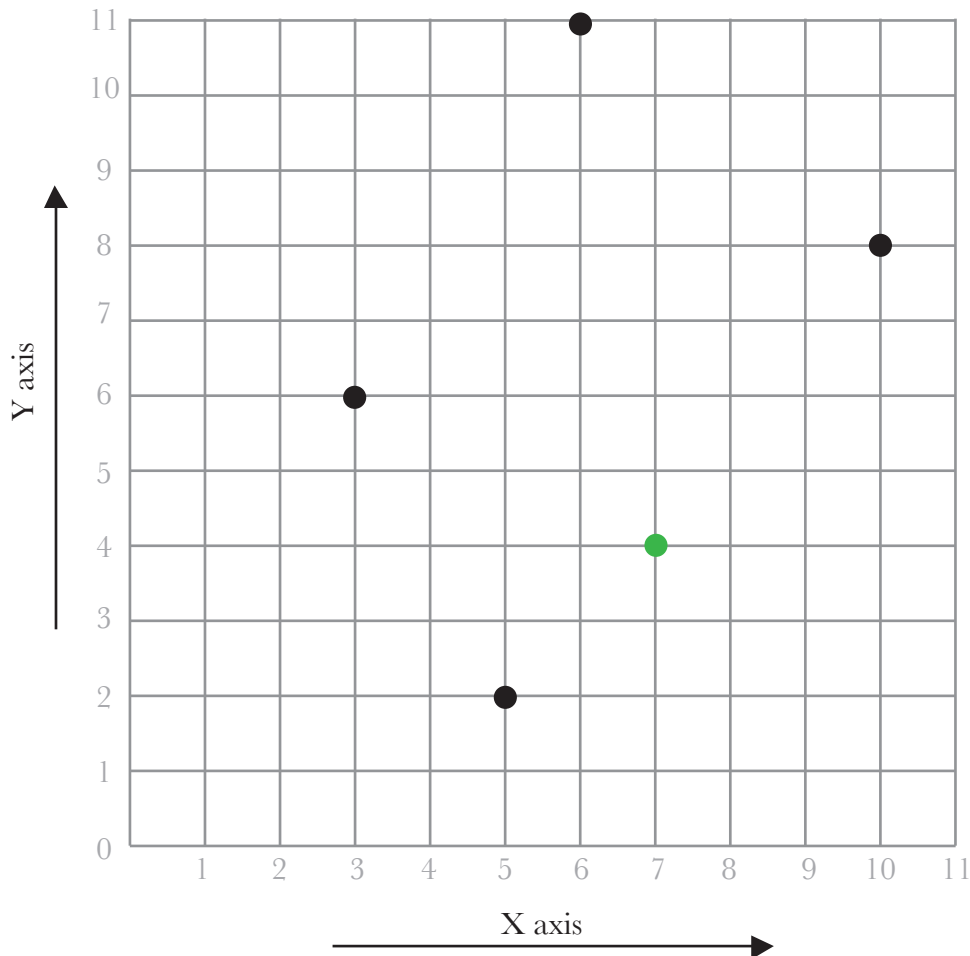

How do you plot the coordinates?

1. First, count the X units horizontally.
2. Second, count the Y units vertically.

(7, 4) is plotted in green below. 7 is the X coordinate and 4 is the Y coordinate.

Plot the following coordinates:

(10, 8) (5, 2) (6, 11) (3, 6)

Identify the plotted coordinates:

1. (10, 4) 2. (3, 3) 3. (0, 8) 4. (11, 7)
