

Add Linear Expressions

You can add expressions using the properties of operations.

Let's try it! Simplify $(2x - 15) + (-5x + 9)$.

$$(2x - 15) + (-5x + 9) \quad \text{Identify like terms.}$$

$[2x + (-5x)] + (-15 + 9) \quad \text{Use the commutative and associative properties to reorder and group like terms.}$

$$-3x + (-6) \quad \text{Combine like terms.}$$

$-3x - 6 \quad \text{Rewrite addition as subtraction to simplify the final expression.}$

Try it yourself! Find each sum.
