

# Basketball - What is Multiplication?

A basketball player can score either a 2 point shot or a 3 point shot. You will be figuring out how many points some of the players on the team score by filling in the chart.

## Example:

Francisco shot 5 baskets. Each was worth 3 points. How many points did he score?

1. Heather shot 6 baskets. Each was worth 2 points. How many points did she score? Fill in the chart.

|                             |                          |
|-----------------------------|--------------------------|
| <b>Commutative Property</b> | <b>Repeated Addition</b> |
| <input type="text"/>        |                          |
| <b>Groups</b>               | <b>Array</b>             |

# Basketball - What is Multiplication?

2. Gerald shot 7 baskets. Each was worth 3 points. How many points did he score? Fill in the chart.

|                             |                          |
|-----------------------------|--------------------------|
| <b>Commutative Property</b> | <b>Repeated Addition</b> |
| <b>Groups</b>               | <b>Array</b>             |

3. Cara shot 8 baskets. Each was worth 2 points. How many points did she score? Fill in the chart.

|                             |                          |
|-----------------------------|--------------------------|
| <b>Commutative Property</b> | <b>Repeated Addition</b> |
| <b>Groups</b>               | <b>Array</b>             |
