

Cellular Switcharoo

Dr. Cellman left his lab door open and labels for his cell specimens got mixed up! Help Dr. Cellman by correctly labelling the cells. Use his notes for help.

Diatoms are single-celled algae that create delicate glass shells for protection.

Amoebas are single-celled organisms that look like blobs.

Nerve cells have a central body with long fibers that extend from the center.

Plant cells have a thick cell wall. Their cell parts are filled with green chemical called chlorophyll.
