## Converting Temperature

Before leaving the house, Tim checked his thermometer. The thermometer read $34^{\circ}$ Celsius. 'Well, that must be cold!' Tim thought as he dressed warmly. When Tim left his house, he was surprised to find that it was hot and sunny outisde! He thought he read his thermometer correctly, but Tim forgot to convert Celsius to Fahrenheit.

Help Tim with a few temperature conversion exercises, so he won't repeat the same mistake twice!

## Example

To convert Celsius $(\mathbf{C})$ to Fahrenheit $(\mathbf{C})$, just follow these easy steps!
step one
$34{ }^{\circ} \mathrm{C}=\frac{34}{1}$
Convert $34^{\circ} \mathrm{C}$ into a fraction

$$
\begin{aligned}
& \text { step two } \\
& \frac{34}{1} \times \frac{9}{5}=\frac{306}{5} \\
& \text { Multiply the fraction by } 9 / 5 .
\end{aligned}
$$

## step three

$306 \div 5=61.2$
Convert your fraction into a decimal

## final step

$61.2+32=93.2^{\circ} \mathbf{F}$
Add $32^{\circ}$ to 61.2. This adjusts the offset in the Fahrenheit scale

| 1) $19{ }^{\circ} \mathrm{C}=$ | 8) $40^{\circ} \mathrm{C}=$ |
| :---: | :---: |
| 2) $4{ }^{\circ} \mathrm{C}=$ | 9) $91{ }^{\circ} \mathrm{C}=$ |
| 3) $45^{\circ} \mathrm{C}=$ | 10) $53{ }^{\circ} \mathrm{C}$ |
| 4) $88{ }^{\circ} \mathrm{C}$ | 11) $47^{\circ} \mathrm{C}$ |
| 5) $97{ }^{\circ} \mathrm{C}=$ | 12) $22{ }^{\circ} \mathrm{C}=$ |
| 6) $62{ }^{\circ} \mathrm{C}=$ | 13) $50{ }^{\circ} \mathrm{C}=$ |
| 7) $37{ }^{\circ} \mathrm{C}$ | 14) $86^{\circ} \mathrm{C}=$ |
