

Fantasylands: The Good, the Bad, and the Ugly

Compare and contrast the fantasylands in ***Coraline*** and ***The Bridge to Terabithia***. Both start out as places the characters can escape to. How does each of these places change for the characters in the two books and movies?

The snow in the movie Coraline is made from superglue and baking soda!

The main Coraline puppet stands 9.5 inches high.

One crew member's job was just to knit miniature sweaters and other clothing for the puppets.
