Name _____   Date _____

Create a Line Plot
(With Your Own Data!)

Use this line plot template to collect data and create your own line plot. First, identify the question you will ask. Make sure it's a question that can be answered with a number from 0–13, like:

- How many pets do you have?
- How many times have you moved?
- How many times a week do you eat candy?
- How many hours of sleep do you get per night?

After collecting responses from your classmates, label the line plot and put an **X** above the appropriate number. What conclusions can you draw about your topic from the line plot?

My Question: _____

Data:	
Name	**Response**

Title: _____

Label: _____
