

Identifying Mode

The mode of a data set is the value that occurs most often.

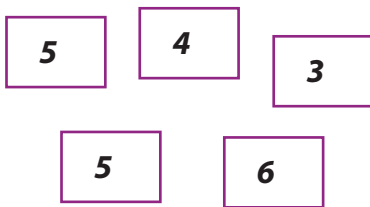

Example: This data set has 6 numbers:

5, 6, 4, 8, 6, 2

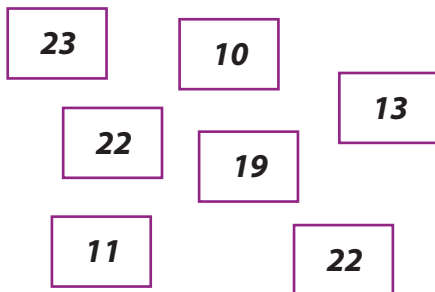

The number that occurs most often is 6, so
6 is the mode of this data set.

Read the questions below and find the mode of each data set. Show your work.

Rose practiced piano each day for 5 days. Here are the numbers of hours she practiced each day. Find the mode.

These are the numbers of hotdogs Toby sold each day this week. Find the mode.

These are Mr. Gordon's students' latest test scores. Find the mode.
