Division Drawings

Drawing pictures is a strategy for division problems. It helps to visualize how the numbers are broken up into groups.

1. Make circles based on this number (the divisor)

$$12 \div 4 = \underline{\hspace{1cm}}$$

2. Distribute this number evenly into those circles (the dividend)

3. Count how many marks are in each circle. That is your answer.

There are 3 in each group, so **12 ÷ 4 = 3**

Directions: Use the strategy of drawing pictures as seen in the example above to solve the division problems.

1. **24 ÷ 8 =**

2. **14 ÷ 7 =**

3. **18 ÷ 3 =**

4. **25 ÷ 5 =**

5. **30 ÷ 6 =**

6. **12 ÷ 2 =**
