

Draw in the four life stages of a butterfly

**1** **Eggs**

A butterfly lays her eggs on a plant, so that the caterpillars will have something to eat when they hatch.

**2** **Caterpillar**

The job of a caterpillar is to eat, eat, eat! Caterpillars can grow up to two inches long in just a few weeks.

**3** **Chrysalis**

The caterpillar attaches itself upside down to a twig and transforms into a chrysalis to protect it while it turns into a butterfly.

**4** **Butterfly**

When the butterfly hatches from its chrysalis, it becomes time to mate and find a place to lay eggs.

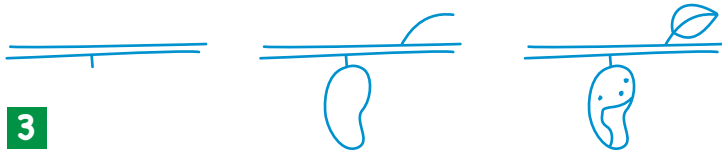

Here are some step-by-step drawings to help you get started!
