Drawing Pentagons

** A **polygon** is considered regular when the sides and angles are equal. An **irregular polygon** contains sides or angles that are not equal.

** A **right triangle** is a triangle containing a right angle (90 degrees).

Directions: Use 5 regular pentagons, 5 irregular pentagons, and 3 right triangles to create a picture. Color the regular pentagons yellow and the irregular pentagons blue.

Include at least 4 more polygons in your picture.

What additional polygons did you include?

Are your additional polygons regular or irregular? How do you know?
