

Squid

The squid is a mollusk. A mollusk has a soft body and no backbone. Squid are many different sizes.

One of the biggest species of squid is the Giant Squid. It is very rarely seen. It has eight arms and two long tentacles. It uses its arms to feed itself. The giant squid's mouth is a "beak."

The giant squid has the largest eye of any animal. Each eye is close to ten inches in diameter. That's the size of a beach ball!

Giant squid are carnivores. They are known to eat fish, shrimp, and smaller squid.

1. Name three facts about squid you learned from this article.

1. _____
