# Find The Compound Shape Area

Calculate the area of each compound shape. Remember, area = L x W. See the example.

1. Divide the compound shape into rectangles.
2. Calculate the area of each shape.
3. The area of shape A = 12 x 5
= 60 sq. inches
4. The area of shape B = 6 x 8
= 48 sq. inches

5. Combine the two areas = 60 + 48 = 108 sq. inches
   Therefore, the area of this compound shape is 108 sq. inches
