# Fraction Math: Addition and Subtraction

If the fractions both have the same denominator, it does not change.

Only add the top numerator.

$$\frac{1}{4} + \frac{1}{4} = \frac{2}{4}$$

This rule is the same for subtraction.

$$\frac{3}{4} - \frac{1}{4} = \frac{2}{4}$$ ← numerator / ← denominator

## Add or subtract the problems below.

$$\frac{2}{4} + \frac{1}{4} =$$

$$\frac{4}{8} + \frac{2}{8} =$$

$$\frac{2}{3} - \frac{1}{3} =$$

$$\frac{3}{7} + \frac{2}{7} =$$

$$\frac{5}{6} - \frac{1}{6} =$$

$$\frac{4}{9} + \frac{3}{9} =$$

$$\frac{4}{5} - \frac{1}{5} =$$

$$\frac{6}{7} - \frac{1}{7} =$$

$$\frac{4}{12} + \frac{2}{12} =$$

$$\frac{4}{10} + \frac{1}{10} =$$

$$\frac{8}{16} + \frac{2}{16} =$$

$$\frac{2}{20} + \frac{7}{20} =$$

$$\frac{6}{15} + \frac{2}{15} =$$

$$\frac{10}{18} - \frac{2}{18} =$$

$$\frac{4}{10} + \frac{2}{10} =$$

$$\frac{10}{25} + \frac{5}{25} =$$

$$\frac{6}{30} + \frac{7}{30} =$$
