

Do the Frog Hop!

Frogs love to hop. A big frog can even hop five spaces at a time! Color every fifth space red and the other spaces green. Then, read the numbers on the red spaces out loud. You've just counted to 20 in a new way—by fives! This is called skip counting by fives.

A large number line is drawn diagonally from the top-left to the bottom-right. It consists of 20 numbered boxes, each containing a number from 1 to 20 in order. The boxes are currently white. To the right of the number line, there are three small green frogs with black spots. At the bottom-left, there is a larger green frog with black spots, facing left.
