

Frog vs. Toad

Both frogs and toads are amphibians. Frogs live mostly in the water, while toads live mostly on the land.

Frog

- Hind legs:** Long, powerful jumping legs;
- Eggs:** Frogs lay eggs in clusters, young live in water;
- Skin:** Moist, smooth, looks slimy;
- Largest Weight:** Largest: Goliath frog 6.6 pounds;
- Teeth:** Frogs have teeth in their upper jaw;
- Eyes:** Eyes bulge out, more round;
- Body:** Have a narrow body;
- Protection:** Camouflage and fast jumps.

Toad

- Shorter legs for walking;
- Toads lay eggs in long chains, some toads give birth to live young, young live in water;
- Dry, bumpy, rough skin;
- Largest: Cane toad 5.8 pounds;
- Toads have no teeth;
- Eyes are lower and more oval shaped;
- Have a wide body;
- Camouflage and poison glands behind their eyes.

Now that you know about frogs and toads, circle the correct answer.
