

# GEOLOGY Word Search

The words can be horizontal, vertical, or diagonal.

Find the terms listed below in the word search puzzle!

**Volcano:** A vent in Earth's surface through which molten rock and gases escape.

**Continent:** Large landmasses of the Earth.

**Subduction:** An oceanic plate is pushed underneath either another oceanic plate, or a continental plate.

**Magma:** A mixture of molten rock and other materials beneath the Earth's surface.

**Lava:** Molten rock expelled by a volcano during an eruption.

**Hotspot:** Areas of the mantle that are unusually hot and cause volcanic activity on the Earth's surface

**Caldera:** A cauldron-like volcanic feature caused by the collapse of land after a volcanic eruption.

**Weathering:** The breaking down of rocks, soils, and minerals through direct contact with the Earth's atmosphere.

**Erosion:** The process of the transport of solids from their natural source to a different location, usually through wind, water, and ice.

**Igneous:** One of the three types of rocks. Igneous rock is formed through the cooling and solidification of lava or magma.

**Sedimentary:** One of the three types of rocks. Sedimentary rocks are formed from the deposition of mineral or organic sediments.

**Metamorphic:** One of the three types of rock. Metamorphic rocks are created by the transformation of existing rock through heat and pressure.

**Seamount:** A mountain rising from the bottom of the ocean, but that does not reach above the surface of the water.

**Mountain:** A landform that stands higher than the surrounding land, and often has steeper sides than a hill. They are usually formed through volcanism, plate tectonics, or occasionally erosion.
