

# Hexagon Fractions

A **hexagon** is a polygon that has:

- Six sides
- Six angles

## Part 1 - Representing Fractions

**Directions:** Color the parts of the shape that represent each fraction.

1.		$\frac{1}{6}$	2.		$\frac{6}{6}$	3.		$\frac{3}{6}$
4.		$\frac{1}{3}$	5.		$\frac{4}{6}$	6.		$\frac{2}{3}$
7.		$\frac{1}{2}$	8.		$\frac{5}{6}$	9.		$\frac{2}{6}$

## Part 2 - Equivalent Fractions

**Directions:** Write the fraction that is represented in each hexagon below. Then, determine if the fractions are equivalent. Explain your answer.

A.

B.

Are fractions A and B equivalent?

How do you know?
