

Name: _____

Date: _____

Hexagon Party

A polygon is considered regular when the sides and angles are equal.
An irregular polygon contains sides or angles that are not equal.

Use five regular hexagons and seven irregular hexagons to create a picture. Color the regular hexagons **green** and the irregular hexagons **blue**. Include at least four more irregular polygons in your picture.

What additional irregular polygons did you include?

How do you know they are irregular?
