

Basic Building Blocks

DNA Strand

Human Cell

A = Adenine

T = Thymine

G = Guanine

C = Cytosine

DNA is Deoxyribonucleic acid. DNA stores the genetic make up of each cell in the human body. The twisted nature of the strands are the double helix. The bars hold one of the four types of acids. The combinations of the acids read like a book to scientists. Each parent provides 50% of a person's DNA . The eye color, the height of a person are just a few simple instructions that DNA hold.
