

Identify the Fraction Errors

A **fraction** is a part of a whole or any number of equal parts.

$$\frac{1}{4}$$

The picture shows the same value as the fraction.

Directions: Look at the picture and the fraction. Do they match? Can you find the errors? Explain your thinking by filling out the sentence frame. Then, fix the mistake. An example has been done for you.

Example:

$$\frac{3}{9}$$

The error is that the denominator in the fraction is wrong. The picture shows that there are 10 petals on the flower. That means there are 10 equal parts in the whole flower. 9 is not the correct denominator since there are more than 9 equal parts in the whole.

I can fix the error by changing the denominator to 10 in the fraction.

1.

$$\frac{6}{10}$$

The error is that _____

I can fix the error by _____

Name _____

Date _____

Identify the Fraction Errors

2.

$$\frac{3}{5}$$

The error is that _____

I can fix the error by _____

3.

$$\frac{4}{5}$$

The error is that _____

I can fix the error by _____

4.

$$\frac{1}{8}$$

The error is that _____

I can fix the error by _____
