

Female Reproductive System

1. ovary- female reproductive organ in which eggs (ova) and the hormones estrogen and progesterone are produced.

2. fallopian tube- duct along which eggs (ova) travel from the ovary to the uterus

3. endometrium- lining of uterus in which fertilized eggs are implanted

4. uterus- muscular organ in which developing fetus gestates until birth

5. cervix- neck of the uterus which opens into the vagina

6. vagina (birth canal)- muscular tract leading from the uterus to the exterior body

7. primary follicles- immature eggs or ova

8. mature ovum- female reproductive cell released by the ovaries during ovulation
