# It's Equal: Turn Improper Fractions into Mixed Numbers

Turn the improper fraction into a mixed number.

First, divide the numerator by the denominator. Write down the whole number you found. Then, write the remainder above the denominator.

**Example:** **Turn $\frac{14}{5}$ into a mixed fraction.**

If you divide 14 by 5, you get 2 with 4 as a remainder.

Write the 2 , then write the 4 (remainder) above the 5 (denominator).

whole number $\longrightarrow$ $2\frac{4}{5}$ $\longleftarrow$ *remainder*

$\longleftarrow$ *denominator*

$\dfrac{17}{9}$

$\dfrac{22}{6}$

$\dfrac{10}{3}$

$\dfrac{7}{2}$

$\dfrac{31}{7}$

$\dfrac{44}{3}$

$\dfrac{19}{4}$

$\dfrac{13}{8}$

## Challenge!

Circle the mixed number that equals.

$\dfrac{61}{8}$
$\qquad$
$1\frac{6}{8}$
$\qquad$
$5\frac{7}{8}$
$\qquad$
$7\frac{5}{8}$
$\qquad$
$6\frac{11}{8}$
