## Make a Summary: Butterflies

**Directions:** Circle new vocabulary words. Then use a crayon or highlighter to underline the most important parts of the text. Finally, write a 3–4 sentence summary.

Rutterflies start life as tiny edgs laid on ton	
Butterflies start life as tiny eggs laid on top	
of leaves. The butterfly lays eggs on leaves	
they like to eat. When the egg hatches, out	
comes the larva, or caterpillar. They eat and	
eat. As they grow, they shed their skin, or	
exoskeleton. When the caterpillar has grown	
to its full size, it makes a chrysalis. This is	
called the pupa stage. When the caterpillar is	
done forming inside the pupa, a butterfly will	
come out. At first its wings are folded and	
wet, but in a few hours they are dry and are	
ready to fly.
