

LINEAR MEASUREMENTS

A simple way to remember the metric system is remembering the ladder method.

How do you use the "Ladder Method"?

- 1) Figure out a starting point.
- 2) Count the "jumps" to your end point.
- 3) Multiply or divide by 10 in the power of every "jump"

EXAMPLE : 4 m = mm

- 1) $4 \text{ m} = \text{mm}$
starting point ending point
- 2) It takes 3 "jumps" to get from meter to millimeter
- 3) $4.0 \text{ m} = 4.000 \text{ mm} = 4,000.0 \text{ mm}$
 $\times 10^3$ 3 hops

Convert the following measurements using the ladder method.

1) $1 \text{ km} = \underline{\hspace{2cm}} \text{ dm}$ 2) $6 \text{ m} = \underline{\hspace{2cm}} \text{ hm}$ 3) $426 \text{ dm} = \underline{\hspace{2cm}} \text{ mm}$

4) $4 \text{ m} = \underline{\hspace{2cm}} \text{ cm}$ 5) $90 \text{ cm} = \underline{\hspace{2cm}} \text{ dm}$ 6) $80000 \text{ mm} = \underline{\hspace{2cm}} \text{ hm}$

7) $24 \text{ cm} = \underline{\hspace{2cm}} \text{ dam}$ 8) $42 \text{ dam} = \underline{\hspace{2cm}} \text{ km}$ 9) $45 \text{ m} = \underline{\hspace{2cm}} \text{ dam}$

10) $400 \text{ mm} = \underline{\hspace{2cm}} \text{ m}$ 11) $3.6 \text{ hm} = \underline{\hspace{2cm}} \text{ cm}$ 12) $2.1 \text{ km} = \underline{\hspace{2cm}} \text{ mm}$

13) $9 \text{ m} = \underline{\hspace{2cm}} \text{ mm}$ 14) $188 \text{ cm} = \underline{\hspace{2cm}} \text{ m}$ 15) $345 \text{ dm} = \underline{\hspace{2cm}} \text{ km}$
