Partial Quotient Division

Directions: Use the partial quotient strategy to solve the following division problems. There will be no remainders.

EXAMPLE:

| | | |
|----------------------|---------------|--|
| $8 \overline{) 672}$ | 8×80 | Determine how many 8s are in 640. |
| $- 640$ | 8×4 | |
| 32 | | |
| $- 32$ | | |
| 0 | | Add the total to estimate the answer: $80 + 4 = 84$ |

$$5 \overline{) 845}$$

$$2 \overline{) 452}$$

$$3 \overline{) 642}$$

$$8 \overline{) 360}$$

$$7 \overline{) 798}$$

$$9 \overline{) 117}$$

$$6 \overline{) 750}$$

$$8 \overline{) 704}$$
