

POWER OF A POWER

The **Power of a Power Property** helps you simplify expressions that have a power raised to a power. It states that you can keep the base and multiply the exponents.

$$(x^n)^m = x^{n \cdot m}$$

Let's try it! Simplify $(7^3)^2$ using the Power of a Power Property.

$$(7^3)^2 = 7^{3 \cdot 2} = 7^6$$

You can see why this property works by expanding each power and simplifying.

$$(7^3)^2 = (7 \cdot 7 \cdot 7)^2 = (7 \cdot 7 \cdot 7) \cdot (7 \cdot 7 \cdot 7) = 7 \cdot 7 \cdot 7 \cdot 7 \cdot 7 \cdot 7 = 7^6$$

Try it yourself! Simplify each expression. Express each answer as a power.

$(8^2)^4 = \underline{\hspace{2cm}}$

$(3^4)^5 = \underline{\hspace{2cm}}$

$(7^3)^6 = \underline{\hspace{2cm}}$

$(10^8)^2 = \underline{\hspace{2cm}}$

$(4^5)^{10} = \underline{\hspace{2cm}}$

$(5^7)^7 = \underline{\hspace{2cm}}$

$(2^9)^6 = \underline{\hspace{2cm}}$

$(8^7)^4 = \underline{\hspace{2cm}}$

$(11^8)^8 = \underline{\hspace{2cm}}$

$(9^9)^8 = \underline{\hspace{2cm}}$

$(5^6)^{11} = \underline{\hspace{2cm}}$

$(6^{12})^7 = \underline{\hspace{2cm}}$

$(12^6)^{14} = \underline{\hspace{2cm}}$

$(3^{18})^7 = \underline{\hspace{2cm}}$

$(15^8)^{23} = \underline{\hspace{2cm}}$
