

# Estimating Area Challenge! #2

Practice finding the area of each rectangle. First round the length and width. Then calculate the area using the formula. See how fast you can finish!

**Remember: Rectangular Area = length x width.**

*Rounding to the nearest hundred*

*If the number in the tens place is 5 or greater, the hundreds digit goes up one.*

*If the number in the tens place is 4 or less, the hundreds digit does not change.*

*Example: 468 → 500      712 → 700*

Example:

$$\begin{aligned}\text{Area} &= 121 \times 105 \\ &= 100 \times 100 \\ &= 10,000\end{aligned}$$
