

# Skip-Counting

Directions: Use skip-counting as a strategy to multiply the problems on the page.

Example:

$3 \times 4 = \boxed{12}$

1. Skip-count by two to solve the multiplication problem.

$2 \times 4 = \boxed{\phantom{00}}$

2. Skip-count by five to solve the multiplication problem.

$5 \times 4 = \boxed{\phantom{00}}$

3. Skip-count by two to solve the multiplication problem.

$2 \times 5 = \boxed{\phantom{00}}$

4. Skip-count by ten to solve the multiplication problem.

$$10 \times 3 = \square$$

5. Skip-count by five to solve the multiplication problem.

$$5 \times 3 = \square$$

6. Skip-count by two to solve the multiplication problem.

$$2 \times 10 = \square$$
