## Przewalski's Horse

*Equus ferus przewalskii*

Przewalski's horse is very unique and truly wild horse that has never been domesticated. The very last surviving horses are out on the plains of Mongolia, north of China. About 50 years ago the population dwindled to less than 15 animals. With captive breeding programs, they have released nearly 1,500 horses back into the wild. Even so, this species is still considered to be critically endangered.
