**REVIEW:** Area = length × width

Length is the longest side of a rectangle.

Width is the shortest side of a rectangle.

**Directions:** Fill in the missing information to find the area of each rectangle.

**EXAMPLE:**

$$\text{length} = \underline{8} \text{ ft}$$

$$\text{width} = \underline{6} \text{ ft}$$

$$\text{Area} = \underline{8} \times \underline{6} \text{ ft}$$

$$= \underline{48} \text{ ft}^2$$

1.

$$\text{length} = \underline{\quad} \text{ ft}$$

$$\text{width} = \underline{\quad} \text{ ft}$$

$$\text{Area} = \underline{\quad} \times \underline{\quad}$$

$$= \underline{\quad} \text{ ft}^2$$

2.

$$\text{length} = \underline{\quad} \text{ ft}$$

$$\text{width} = \underline{\quad} \text{ ft}$$

$$\text{Area} = \underline{\quad} \times \underline{\quad}$$

$$= \underline{\quad} \text{ ft}^2$$

3.

$$\text{length} = \underline{\quad} \text{ ft}$$

$$\text{width} = \underline{\quad} \text{ ft}$$

$$\text{Area} = \underline{\quad} \times \underline{\quad}$$

$$= \underline{\quad} \text{ ft}^2$$

4.

$$\text{length} = \underline{\quad} \text{ ft}$$

$$\text{width} = \underline{\quad} \text{ ft}$$

$$\text{Area} = \underline{\quad} \times \underline{\quad}$$

$$= \underline{\quad} \text{ ft}^2$$
