

Rounding Mixed Numbers

When you round a mixed number to the nearest whole number, first you must look at the fraction.

If the numerator is equal to or more than half of the denominator, round up.
If it is less than half of the denominator, round down.

$\frac{3}{5} \rightarrow 3$ is more than half of 5, so round up to 3.

$\frac{2}{5} \rightarrow 2$ is less than half of 5, so round down to 2.

Evaluate each mixed number below and circle the ones that round up.

$$\frac{5}{6} \quad \frac{7}{10} \quad \frac{2}{8} \quad \frac{1}{5} \quad \frac{4}{6} \quad \frac{9}{12} \quad \frac{4}{8} \quad \frac{5}{9} \quad \frac{1}{7} \quad \frac{6}{7} \quad \frac{1}{2} \quad \frac{2}{3}$$

Round each mixed number to the nearest whole number.

$$2 \frac{3}{4} = \underline{\quad}$$

$$3 \frac{2}{7} = \underline{\quad}$$

$$9 \frac{3}{4} = \underline{\quad}$$

$$4 \frac{2}{4} = \underline{\quad}$$
